

PROVIDER ALERT
January 28, 2010

ProviderConnect Enhancements

We are pleased to announce that the following ProviderConnect enhancements will be available to providers, effective Monday, February 1, 2010:

PRINT OMS DATA: A “Print OMS Data” button will be added to the “OMS Discharge Completion” screen, allowing providers to view and/or print only the OMS data for all OMS discharges, including adults and Child and Adolescents.

PRINT OMS DATA VIEW: This enhancement will modify the “Print View” questionnaires for all OMS printable views, including Adult and Child and Adolescent interviews. Questions that were not answered will be blank on the print view and will not include data values such as “SKIP” or “MISSING”. An additional modification to the “Print View” for Adult interviews removes the section header and interview notes from display on the print version.

THERAPEUTIC NURSERY AND EXTENDED THERAPY: The following additions will appear under: Level of Service = Outpatient, Level of Care = Outpatient, Type of Care = the following:

- Family Psychosocial Education (FPE) with or without consumer present (Codes H2027 and H1011.) Limited to approved FPE providers.
- Prolonged Therapy (CPT Codes 90808, 90809, 99354, 99355). Limited to OMHCs.
- Consultation Codes (CPT Codes 99241-99245). Limited to Physicians and Psychiatric Nurse Practitioners. May also be used to bill for History and Physicals for consumers entering hospital based PHP Programs.

Refer to the posted “Combination of Service” rules for further clarification regarding services which may be provided to the same consumer on the same day.

MODIFICATION TO THE ADULT PRP QUESTIONS:

- The question, “If requesting PRP, was the consumer referred by a licensed clinician?” is now required for all consumers, regardless of age.
- The question “if requesting PRP for a child, is the child in active treatment” is now required for consumers under age 18.

Reminder: in order for PRP for a consumer to be authorized, the consumer must be referred by a licensed clinician.

FUTURE OMS ENHANCEMENT: The OMS Print/Read only version now displays a “Question Completion Rate” under the clinician’s signature at the bottom of the form. A % symbol appears with no accompanying value. A future enhancement will automatically populate this percentage.
